

# DRF (daytime release function)

**ARX**  
*The Perfect Move*

by KOVINOPLASTIKA LOŽ

## Day / Night function

Door lock allows you to choose day or night mode.

In the **day mode**, the door is switched ON without the use of a key, from inside and outside.

In the **night mode**, it is possible to switch the door without a key from the inside only.

From the outside it is possible to move the door only using the key.

## Day mode - activation

Day mode can be activated in two steps:

1. Press the handle and hold it in this position until the end of step 2

2. Move the slider on faceplate to left position. Release the handle.

## Day mode - operation

Daily time-lock operations:

1. Latch bolt is deactivated – self-blocked in the housing

2. The roller feed holds the door in the closed position.

## Night mode - activation

Night mode can be activated in two steps:

1. Press the handle and hold it in this position until the end of step 2

2. Move the slider to the right position. Release the handle.

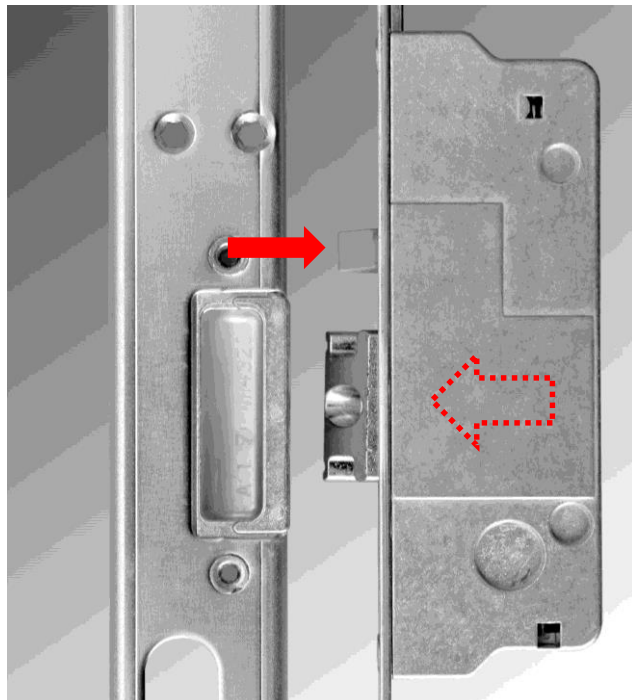

## Night mode - operation

In night mode, the latch bolt normally performs its function:

1. By pressing the trigger, the mechanism in the latch bolt is activated

2. The latch bolt is activated and self-locked

**Thank you for attention**
